15. Design Thinking Process (Phase 2)

15.1 Overview

To design a financial inclusion product for urban gig workers, the Design Thinking framework was used to deeply understand user pain points, redefine the problem through behavioural insights, ideate practical financial interventions, prototype key product experiences, and validate assumptions through continuous feedback.

The process ensured that the product was built around real earning behaviour, emotional stress points, and trust barriers experienced by gig workers, rather than traditional banking assumptions.

The five stages followed were:

1. Empathize
2. Define
3. Ideate
4. Prototype
5. Test

15.2 Stage 1 - Empathize

Objective

Understand the day-to-day financial struggles, behaviours, motivations, and emotional challenges faced by gig workers.

Research Activities Conducted

- Observation of delivery and ride-hailing workflows
- Informal conversations with gig workers
- Behavioural analysis of earning and spending cycles
- Secondary research on financial exclusion
- Review of existing fintech and lending solutions

This stage helped reveal that the real problem was not just “lack of loans,” but the absence of financial stability and trust.

Key User Insights

Observation	User Impact
Earnings fluctuate daily	Constant cashflow anxiety
Fuel and rent consume immediate earnings	Low savings ability
Emergencies disrupt income generation	Reliance on high-interest borrowing
Banks reject irregular income profiles	No access to formal credit
Workers trust fast access over complex processes	Simplicity becomes critical

15.3 Stage 2 - Define

Problem Statement

Urban gig workers are digitally active and generate continuous earning data through platforms, yet remain excluded from formal financial systems due to irregular income structures and lack of recognized financial identity.

As a result, even small financial disruptions force workers toward informal borrowing and long-term instability.

Refined User Need

Gig workers need:

- instant and affordable liquidity,
- flexible financial tools aligned to irregular earnings,
- emergency protection,
- and a recognized financial identity that helps them grow financially over time.

Jobs-To-Be-Done (JTBD)

Functional Jobs	Emotional Jobs
Access funds before pay-out	Feel financially secure
Save automatically during good earning periods	Reduce anxiety and stress
Handle emergencies without borrowing	Feel recognized and valued
Build a credit identity	Gain confidence in the future

This stage transformed broad observations into clearly defined user-centered problems.

15.4 Stage 3 - Ideate

Objective

Generate solution concepts that directly address liquidity, savings, trust, and financial identity.

Ideation Methods Used

- Brainstorming
- ERRC Framework
- SCAMPER Framework
- Opportunity Mapping
- JTBD Mapping

Solution Ideas Explored

- Earned wage access
- Instant micro cash advances
- Auto-savings linked to deliveries
- Alternative credit scoring
- Emergency protection features
- Financial behaviour nudges
- AI-led financial guidance

Key Product Direction Chosen

After evaluating feasibility, urgency, and user impact, the following MVP direction was selected:

- Instant cash advance
- Alternative Gig Score
- Auto-savings
- UPI-first onboarding

15.5 Stage 4 - Prototype

Objective

Convert ideas into tangible product experiences for validation.

Prototype Components Designed

- Onboarding flow
- Cash advance eligibility screen
- Gig Score dashboard
- Auto-savings setup
- Emergency withdrawal flow
- Repayment tracking experience

UX Principles Applied

Principle	Application
Frictionless support	1–2 tap transactions
Transparency	Clear repayment breakdown
Trust-first design	No hidden fees
Simplicity	Mobile-first experience
Behavioural reinforcement	Savings nudges and reward streaks

Prototype Approach

The product was designed as a lightweight mobile-first fintech experience optimized for:

- fast onboarding,
- low digital friction,
- and trust-building among first-time formal financial users.

15.6 Stage 5 - Test

Objective

Validate assumptions around usability, trust, and product relevance.

Validation Approach

The prototype will be tested through:

- JTBD-based user interviews
- Task-based usability testing
- Feedback on trust and transparency
- Feature desirability validation
- Behavioural adoption analysis

Key Questions for Testing

- Do users trust the repayment process?
- Is the cash advance useful during earning gaps?
- Are users willing to enable auto-savings?
- Does the Gig Score feel motivating?
- Is onboarding simple enough for first-time users?

Success Indicators

Metric	Validation Goal
First cash advance usage	High activation
Repeat usage	Product relevance
Savings opt-in rate	Behavioural trust
Repayment completion	Financial viability
User satisfaction feedback	Product-market fit

16. User Personas

16.1 Purpose of Persona Building

User personas were created to represent the primary customer segments within the urban gig economy and to ensure that product decisions are grounded in real behavioural and financial realities.

The personas help:

- prioritize MVP features,
- understand emotional and functional pain points,
- design low-friction user experiences,
- and align financial tools with earning patterns.

The personas were developed using:

- behavioural observations,
- secondary research,
- gig economy patterns,
- and early user conversations.

16.2 Primary Persona - Rohit Sharma

Persona Summary

Rohit represents the core MVP audience: digitally active delivery workers with high income variability and constant short-term liquidity pressure.

Basic Profile:

Attribute	Details
Name	Rohit Sharma
Age	26
Occupation	Food Delivery Rider
Location	Pune
Education	12th Pass
Monthly Income	₹22,000–₹35,000
Device	Mid-range Android smartphone
Digital Usage	High
Payment Preference	UPI + Cash Tips

Goals & Motivations:

Functional Goals	Emotional Goals
Earn more during peak hours	Feel financially stable
Avoid borrowing before pay-outs	Reduce stress about emergencies
Save for bike upgrade	Support family confidently
Maintain high platform ratings	Feel recognized for hard work

Pain Points:

Problem	Impact
Fuel expenses before pay-out	Frequent cash shortages
Bike or phone breakdown	Complete income disruption
No access to affordable credit	Reliance on informal borrowing
Irregular earnings	Difficulty planning savings
Fear of suspension	Financial insecurity

Behaviours & Habits:

Behaviour	Insight
Withdraws money instantly	Low cash reserves
Avoids banks	Trust barrier
Uses UPI daily	High digital readiness
Tracks incentives closely	Motivated by rewards
Rarely saves consistently	Needs automation

Emotional Triggers:

Trigger	Emotional Response
Running out of fuel money	Anxiety
Sudden emergencies	Panic
Completing delivery streaks	Pride
Improving Gig Score	Confidence

16.3 Secondary Persona - Sana Shaikh

Persona Summary

Sana represents experienced ride-hailing workers managing higher financial responsibilities, including EMIs and family expenses.

Basic Profile:

Attribute	Details
Name	Sana Shaikh
Age	32
Occupation	Ride-Hailing Driver
Location	Mumbai
Monthly Income	₹30,000–₹60,000
Education	Diploma
Family	Married, 1 child
Assets	Car on EMI

Goals & Motivations:

Functional Goals	Emotional Goals
Pay EMIs consistently	Feel financially secure
Build a credit score	Gain financial independence
Avoid debt accumulation	Reduce anxiety around repayments

Pain Points:

Problem	Impact
Car repair costs	Income instability
Loan rejection	Frustration
Incentive unpredictability	Planning difficulty
No income protection	Stress during downtime

Behaviours:

Behaviour	Insight
Tracks earnings daily	Financially conscious
Uses banking apps	Moderate financial literacy
Carries existing debt	Credit-sensitive segment

16.4 Tertiary Persona - Vikas Kumar

Persona Summary

Vikas represents early-stage digital finance users with low trust, low literacy, and high vulnerability to informal lending.

Basic Profile:

Attribute	Details
Name	Vikas Kumar
Age	23
Occupation	Warehouse Gig Worker
Location	Bengaluru Outskirts

Attribute	Details
Monthly Income	₹15,000–₹20,000
Education	10th Pass
Digital Comfort	Beginner

Goals & Motivations:

Functional Goals	Emotional Goals
Send money home regularly	Support family responsibly
Avoid local money lenders	Feel financially safe
Learn financial basics	Build confidence

Pain Points:

Problem	Impact
Delayed salaries	Cashflow stress
Medical emergencies	High-interest debt
Low digital literacy	Fear of complex apps
No financial documentation	Excluded from formal finance

Behaviours:

Behaviour	Insight
Uses WhatsApp heavily	Familiar interface matters
Relies on UPI only	Limited banking comfort
Avoids complicated apps	Simplicity is critical

16.5 Persona Prioritization Strategy

Persona	Adoption Ease	Financial Need Intensity	Data Availability	Priority
Rohit (Delivery)	High	High	High	Primary MVP
Sana (Ride-Hailing)	Medium-High	High	Medium-High	Phase 2
Vikas (Logistics)	Medium	Medium-High	Medium	Phase 3

16.6 Key Persona Insights

Across all personas, several recurring patterns emerged:

Common Financial Challenges

- Irregular earnings
- Daily liquidity pressure
- Lack of emergency protection
- No recognized financial identity
- Dependence on informal borrowing

Common Behavioural Patterns

- High smartphone and UPI usage
- Preference for fast and simple experiences
- Low tolerance for complex banking flows
- Trust built through transparency and predictability

17. User Stories

17.1 Overview

User stories were created to translate user pain points into actionable product requirements from the perspective of gig workers.

The stories focus on:

- liquidity access,
- financial stability,
- trust,
- savings behaviour,
- and financial identity building.

These stories were derived from:

- persona analysis,
- JTBD mapping,
- and recurring behavioural pain points observed during research.

17.2 Product Epics

The MVP was divided into the following core product epics:

Epic	Objective
Onboarding & Verification	Enable quick and trusted onboarding
Instant Liquidity	Solve short-term cashflow gaps
Alternative Financial Identity	Build user credit visibility
Savings & Financial Growth	Encourage long-term stability
Repayment & Trust	Ensure transparent recovery and repayment
Notifications & Engagement	Reinforce habits and retention

17.3 User Stories - Onboarding & Verification

Epic: Onboarding (Critical MVP)

User Story 1

As a delivery worker,
I want to sign up quickly using my phone number and UPI,
so that I can access funds without complicated paperwork.

Acceptance Criteria

- OTP verification works successfully
- UPI verification completes within minutes
- User onboarding takes less than 5 minutes
- Minimal document upload required

17.4 User Stories - Instant Liquidity

Epic: Cash Advance (MVP)

User Story 2

As a delivery rider,
I want to access a small instant cash advance before pay-out day,
so that I can continue working without borrowing from local lenders.

Acceptance Criteria

- Eligible amount visible instantly
- Advance disbursed within minutes
- Repayment date shown clearly
- Transparent fee breakdown displayed

17.5 User Stories - Alternative Financial Identity

Epic: Gig Score

User Story 3

As a gig worker,

I want my delivery performance and earnings behaviour to contribute toward a financial score, **so that** I can access better financial opportunities in the future.

Acceptance Criteria

- Gig Score updates dynamically
- Users can view score factors
- Better repayment behaviour improves score

17.6 User Stories - Savings & Growth

Epic: Auto-Savings

User Story 4

As a delivery worker,

I want a small amount to automatically save after every delivery, **so that** I can gradually build financial stability without manual effort.

Acceptance Criteria

- User can set savings amount
- Auto-save toggle available
- Savings progress visible

17.7 User Stories - Repayment & Trust

Epic: Repayment Experience (MVP)

User Story 5

As a user,

I want repayment to happen automatically after my pay-out, **so that** I do not miss deadlines or face penalties.

Acceptance Criteria

- Auto-repayment confirmation shown
- Grace period available if pay-out delayed
- Repayment reminders sent proactively

17.8 User Stories - Engagement & Retention

Epic: Notifications & Nudges

User Story 6

As a user,

I want reminders and nudges based on my earnings behaviour,
so that I can manage finances more effectively.

Acceptance Criteria

- Timely savings reminders
- Low balance alerts
- Reward streak notifications

17.9 Conclusion – User Stories

The user stories helped transform broad customer pain points into structured product requirements that can guide:

- feature development,
- UX design,
- engineering priorities,
- and MVP scope definition.

By grounding product requirements in real user behaviours and JTBD, the product remains focused on solving meaningful financial challenges for gig workers rather than simply offering generic fintech features.

18. Design & Development Strategy

18.1 Overview

The product will follow a hybrid execution strategy where core product functions are handled internally, while selected specialized capabilities are outsourced through strategic partnerships.

This approach ensures:

- faster MVP execution,
- stronger control over user experience,
- reduced compliance risk,
- and scalable infrastructure development.

The decision was influenced by:

- the sensitive nature of financial data,
- the need for trust-centric UX,
- and the regulatory complexity of fintech systems.

18.2 Internal vs Outsourced Responsibilities

Function	Internal / Outsourced	Rationale
Product Strategy	Internal	Core business logic and user understanding must remain internal
UX/UI Design	Internal	Trust, simplicity, and onboarding experience are key differentiators
User Research & Testing	Internal	Direct user understanding is critical for product-market fit
Mobile App Development	Internal	Enables faster iteration and better feature control
AI/Behavioural Scoring Logic	Internal	Proprietary advantage and long-term differentiation
Payment Infrastructure	Outsourced / Partnered	Faster deployment using existing regulated systems
Loan Capital & Lending Compliance	Outsourced via NBFC partnerships	RBI compliance requires regulated financial entities
KYC Verification	Outsourced	Specialized providers reduce fraud and onboarding friction
Cloud Hosting & Security	Third-party infrastructure	Reliable scaling and uptime management

18.3 Why Core Product Functions Will Be Internal

The core user experience and financial intelligence systems are central to the product's differentiation.

Key areas kept internal include:

- onboarding experience,
- cash advance workflows,
- Gig Score logic,
- savings behaviour systems,
- and AI-driven financial personalization.

These systems directly influence:

- user trust,
- retention,
- repayment behaviour,
- and long-term competitive advantage.

Keeping them internal allows:

- rapid experimentation,
- tighter feedback loops,
- and ownership of proprietary behavioural insights.

18.4 Why Certain Functions Will Be Outsourced

Some capabilities require:

- regulatory licensing,
- specialized infrastructure,
- or large-scale operational systems.

Instead of building these from scratch during the MVP stage, strategic partnerships reduce time-to-market and operational risk.

A. NBFC Partnership for Lending

The product itself will not directly issue loans during the early stage.

Instead:

- regulated NBFC partners will provide lending infrastructure,
- while the platform handles user experience, scoring, and engagement.

Benefits

- Faster compliance readiness
- Reduced legal complexity
- Lower financial risk exposure
- Easier scaling

B. KYC & Identity Verification Providers

KYC systems will be integrated through external providers specializing in:

- Aadhaar verification,
- PAN validation,
- and fraud detection.

Benefits

- Faster onboarding
- Better fraud prevention
- Regulatory compliance support

C. Payment & UPI Infrastructure

Rather than building payment rails internally, the product will integrate with:

- UPI gateways,
- banking APIs,
- and pay-out infrastructure providers.

Benefits

- High reliability
- Faster deployment
- Secure transaction handling

19. Tech Capabilities & Technology Choices

19.1 Overview

The product is being developed as a mobile-first fintech platform focused on financial inclusion for gig workers.

The company requires strong capabilities in:

- scalable backend systems,
- mobile development,
- AI/ML infrastructure,
- fintech integrations,
- and data security.

The technology strategy is designed to balance:

- rapid MVP development,
- scalability,
- security,
- and regulatory compliance.

19.2 Core Technology Capabilities

Capability	Purpose	Technology Choice
Mobile App Development	Fast, lightweight mobile experience	Flutter / React Native
Backend Infrastructure	Real-time transactions & integrations	Node.js / Python APIs
AI & Behavioural Scoring	Alternative credit assessment	Python ML models
Payment Integrations	Instant disbursal & repayment	Razorpay / Cashfree APIs
Analytics & Monitoring	User behaviour tracking	Firebase / Mixpanel

19.3 Security & Compliance Capabilities

Since the platform handles financial and identity data, strong security capabilities are essential.

Security Areas:

Capability	Importance
Data encryption	Protect financial information
Consent-based access	Build user trust
Device authentication	Prevent fraud
Role-based access control	Internal security
Audit logging	Compliance tracking

19.4 Infrastructure Strategy

Cloud Infrastructure

Technology Choice

- AWS / Google Cloud Platform

Why

- Scalability
- Security
- Uptime reliability
- Faster deployment

20. MVP Features

20.1 Core MVP Goals

The MVP is designed to achieve the following goals:

Goal	Purpose
Solve daily cashflow gaps	Reduce reliance on informal borrowing
Build user trust quickly	Increase repeat engagement
Create a financial identity	Enable future credit opportunities
Encourage micro-savings behaviour	Improve long-term resilience
Validate repayment behaviour	Reduce lending risk

20.2 Core MVP Features

Feature 1 - Instant Cash Advance

Description

Users can instantly access small-ticket cash advances based on completed gig work and expected pay-outs.

User Problem Solved

Gig workers frequently face:

- fuel shortages,
- food expenses,
- rent pressure,
- and emergency costs before pay-out cycles.

Key Functionality

- Eligible amount displayed instantly
- One-tap withdrawal
- UPI disbursal
- Automated repayment after pay-out
- Transparent fee breakdown

Feature 2 - Alternative Gig Score

Description

A behavioural financial score generated using:

- delivery consistency,
- earnings stability,
- platform ratings,
- repayment behaviour,
- and work patterns.

User Problem Solved

Traditional banks do not recognize irregular gig income, preventing access to formal financial products.

Key Functionality

- Dynamic score updates
- Score improvement indicators
- Reliability streak tracking
- Creditworthiness visibility

Feature 3 - Auto-Savings per Delivery

Description

A small amount is automatically saved after each completed delivery or earning cycle.

User Problem Solved

Most gig workers struggle to save consistently because earnings are consumed immediately.

Key Functionality

- Adjustable savings amount
- Auto-save toggle
- Goal-based savings tracking
- Visual progress indicators

Feature 4 - UPI-first Mobile Onboarding Description

Simple onboarding process using:

- phone verification,
- UPI linking,
- and consent-based platform data access.

User Problem Solved

Traditional financial onboarding is often lengthy and documentation-heavy.

Key Functionality

- OTP verification
- UPI authentication
- Soft KYC flow
- Fast eligibility check

Feature 5 – Automated Repayment Description

Repayment is automatically deducted after gig pay-outs.

Benefits

- Reduces missed payments
- Minimizes user effort
- Lowers default risk

20.3 Features Deliberately Excluded from MVP

To avoid unnecessary complexity, several features were intentionally postponed.

Deferred Feature	Reason Deferred
Full insurance products	Regulatory and operational complexity
Large personal loans	Requires stronger repayment history
Investment products	Not core to immediate user pain
Advanced financial analytics	Low early-stage priority
Multi-platform ecosystem	Focus needed on primary use case

21. Feature Prioritization Strategy

21.1 Prioritization Framework Used

A hybrid prioritization framework was used combining:

- RICE Framework
- User Pain Severity Analysis
- MVP Feasibility Assessment

21.2 RICE Framework

Features were evaluated using the following criteria:

Factor	Meaning
Reach	Number of users impacted
Impact	Degree of value delivered
Confidence	Certainty of success
Effort	Technical and operational complexity

This helped balance:

- user importance,
- business value,
- and execution practicality.

21.3 Feature Prioritization Matrix

Feature	User Value	Business Value	Technical Feasibility	Priority
Instant Cash Advance	Very High	Very High	High	P0
UPI-first Onboarding	Very High	High	High	P0
Auto-Repayment	High	Very High	Medium	P0
Gig Score	High	High	Medium	P0
Auto-Savings	High	Medium	High	P1
Savings Goals	Medium	Medium	High	P1
Financial Nudges	Medium	Medium	High	P2
Emergency Insurance	High	Medium	Low	P2
Larger Credit Products	High	High	Low	P3
Investment Features	Medium	Medium	Medium	P3

21.4 Prioritization & Product Roadmap Alignment

The prioritization strategy also supports phased scaling.

Product Phase	Focus
MVP Phase	Liquidity + onboarding
Phase 2	Savings + engagement
Phase 3	Insurance + advanced credit
Phase 4	Financial ecosystem expansion

21.5 How Prioritization Supports Business Sustainability

Feature prioritization was not based only on user desirability, but also on:

- repayment predictability,
- CAC efficiency,
- and operational scalability.

For example:

- instant advances create recurring usage,
- auto-repayment reduces default risk,
- and savings features improve retention.

This ensures the MVP can move toward sustainable unit economics over time.

22. Product Testing & Validation Strategy

22.1 Overview

Before deployment, the product will undergo multiple layers of testing to ensure:

- usability,
- trustworthiness,
- technical reliability,
- repayment flow accuracy,
- and behavioural adoption.

22.2 Objectives of Product Testing

The product testing process aims to validate:

Objective	Why It Matters
Ease of onboarding	Reduce user drop-offs
Trust in financial flows	Improve activation
Repayment reliability	Reduce default risk
Feature usefulness	Ensure product relevance
App stability	Prevent trust breakdown
Behavioural adoption	Validate long-term retention

22.3 User & Usability Testing

User testing will be conducted through:

- JTBD interviews,
- clickable prototype testing,
- and task-based usability sessions.

Key Areas Tested

- Ease of onboarding
- Understanding of repayment terms
- Simplicity of cash advance flow
- Savings feature adoption

Success Metrics:

Metric	Goal
Task completion rate	>85%
Onboarding drop-offs	Low
Time to first transaction	Minimal

22.4 Functional & Technical Testing

The product will be tested to ensure all features work reliably.

Areas Tested

- OTP and KYC verification
- UPI transactions
- Cash advance eligibility
- Auto-repayment flows
- Notification delivery

Edge Cases

- Failed payments
- Delayed pay-outs
- Poor internet connectivity
- Duplicate withdrawal attempts

22.5 Security & Compliance Testing

Since the product operates in fintech, strong security validation is essential.

Focus Areas

- Data encryption
- Fraud prevention
- Consent-based data access
- User authentication
- RBI/KYC compliance readiness

22.6 Pilot Testing

The MVP will first launch with a limited pilot in one city with selected gig workers.

Pilot Goals

- Measure adoption
- Track repayment behaviour
- Validate savings usage
- Identify UX friction points

Success Metrics

Metric	Target
Repayment rate	$\geq 95\%$
90-day retention	$\geq 40\%$
Savings opt-in	$\geq 50\%$

23. AI Integration Strategy

23.1 Overview

AI will play a key role in improving:

- financial accessibility,
- personalization,
- risk assessment,
- and customer support for gig workers.

The product uses AI not just for automation, but to create a more inclusive financial system for users who are traditionally excluded from formal banking.

23.2 AI-Based Credit Score

Purpose

Traditional credit scores fail to recognize gig workers with irregular income patterns.

AI models will analyze:

- earnings consistency,
- work hours,
- delivery completion,
- ratings,
- repayment behaviour,
- and activity patterns

Benefits

- Better credit assessment
- Reduced default risk
- Financial recognition for gig workers
- Personalized credit eligibility

23.3 Generative AI Financial Assistant

Purpose

Provide simple financial guidance in a conversational format.

The GenAI assistant can help users:

- understand repayments,
- explain fees,
- suggest savings habits,
- and answer financial questions in simple language.

Example Use Cases

- “Why did my credit Score change?”
- “How much can I safely withdraw?”
- “How can I improve my repayment streak?”

Benefits

- Improves financial literacy
- Reduces support dependency
- Builds trust and engagement

23.4 Multilingual AI Support

Many gig workers are more comfortable in regional languages.

AI-powered support will provide:

- multilingual chat assistance,
- voice-based explanations,
- and simplified onboarding guidance.

Benefits

- Better accessibility
- Reduced onboarding friction
- Improved adoption among low-literacy users

23.5 Agentic AI for Financial Nudges

Agentic AI systems can proactively monitor user behaviour and trigger contextual actions.

Examples

- Suggest reducing withdrawals during low earning periods
- Recommend savings during high-income weeks
- Alert users before repayment risk occurs
- Offer emergency advance recommendations

Benefits

- Personalized financial coaching
- Improved repayment behaviour
- Better long-term financial habits

23.6 AI for Fraud Detection & Risk Monitoring

AI models will also help identify:

- suspicious transaction patterns,
- fake accounts,
- unusual withdrawal behaviour,
- and repayment fraud risks.

Benefits

- Improved platform security
- Reduced financial losses
- Safer lending ecosystem

23.7 Human + AI Balance

Although AI improves scalability and personalization, sensitive financial decisions will still include:

- human oversight,
- transparent explanations,
- and escalation support.

This prevents:

- unfair decisions,
- over-automation,
- and loss of user trust.

23.8 Ethical AI Considerations

The AI systems will be designed with:

- consent-based data usage,
- explainable scoring logic,
- privacy protection,
- and bias monitoring.

Users will always be informed about:

- what data is used,
- why recommendations are generated,
- and how their Gig Score is calculated.

Experimental Task (Phase 2)

A. Objective

The objective of this exercise was to understand the financial challenges, cashflow needs, borrowing behaviour, and savings habits of gig workers. The interviews were conducted using a Jobs-To-Be-Done (JTBD) approach to uncover unmet needs and validate assumptions made during product discovery.

B. Interview Summary

Interviewee	Occupation	Platform	Location	Interview Duration
User 1	Delivery Rider	Swiggy	Pune	15 mins
User 2	Delivery Rider	Zomato	Pune	12 mins
User 3	Ride-Hailing Driver	Uber	Mumbai	18 mins
User 4	Ride-Hailing Driver	Ola	Mumbai	15 mins
User 5	Logistics Worker	Ekart	Pune	14 mins

C. Raw Notes & Exact Quotes

Interviewee	Exact Quote
User 1	"Sometimes I don't have enough money for fuel before the weekly pay-out."
User 2	"When my bike breaks down, I usually borrow money from friends."
User 3	"Banks don't consider my income stable enough for loans."
User 4	"I want to save, but every month something unexpected comes up."
User 5	"I need money quickly when emergencies happen because salary credits are delayed."

C. Insights → Feature Mapping

User Insight	Feature Introduced in GigPay
Need money before pay-out	Instant Cash Advance
Lack of formal credit history	Gig Score
Difficulty saving consistently	Auto-Savings
Need financial guidance	AI Financial Assistant
Fear of missing repayments	Automated Repayment System

24. Sample Project Plan (Phase 3)

24.1 Overview

The project plan outlines the phased execution approach for building and launching the MVP of the financial inclusion platform for gig workers.

The plan is designed to:

- validate the core product hypothesis quickly,
- minimize operational risk,
- and enable iterative product improvements through pilot-based learning.

The execution approach focuses on:

1. Product discovery
2. MVP design & development
3. Testing & pilot launch
4. Iterative optimization

24.2 High-Level Project Timeline

Phase	Duration	Key Goal
Discovery & Research	Week 1–2	Validate user pain points
Product Design	Week 3–4	Create flows and prototypes
MVP Development	Week 5–8	Build core platform
Testing & QA	Week 9	Validate reliability
Pilot Launch	Week 10–11	Launch with limited users
Optimization & Iteration	Week 12	Improve based on feedback

24.3 Detailed Project Plan

Phase	Activities	Deliverables	Owner
Discovery & Research	User interviews, JTBD analysis, competitor research	Research insights & validated pain points	Product Manager
Product Design	Wireframes, user flows, UI design, prototype testing	High-fidelity prototype	UX/UI Designer
Backend Development	APIs, database setup, pay-out systems, repayment logic	Backend infrastructure	Backend Engineer
Mobile App Development	Onboarding, cash advance flow, Gig Score dashboard	MVP mobile app	Frontend Developer
AI & Scoring Development	Behavioural scoring logic, fraud detection setup	Gig Score engine	AI/Data Engineer
Integration Setup	UPI, KYC, NBFC integration	Connected financial infrastructure	Engineering Team
Testing & QA	Functional testing, usability testing, edge-case validation	QA reports & fixes	QA Engineer
Pilot Launch	Controlled rollout in one city	Live MVP pilot	Product Team
Post-Launch Analysis	Analyze retention, repayment, adoption metrics	Product improvement roadmap	Product Manager

25. Product Development Methodology

25.1 Overview

The product will follow an Agile development methodology using the Scrum framework for MVP execution and iterative product improvement.

Since the platform operates in a rapidly evolving fintech environment with high user dependency and changing requirements, Agile enables:

- faster iteration,
- continuous feedback integration,
- and flexible prioritization.

This methodology is particularly suitable because the product requires:

- ongoing user validation,
- rapid experimentation,
- and phased feature expansion.

25.2 Why Agile Methodology Was Chosen

Traditional waterfall development models are less suitable because:

- user behaviour and financial needs evolve continuously,
- fintech integrations may change during development,
- and MVP learning requires flexibility.

Agile allows the team to:

- release features incrementally,
- gather pilot feedback quickly,
- and improve the product continuously.

25.4 Agile Workflow for the Product

The development cycle will follow:

1. User Research & Requirement Gathering
2. Feature Prioritization
3. Sprint Planning
4. Design & Development
5. Testing & QA
6. Pilot Feedback Collection
7. Iterative Improvements

This approach ensures the product evolves based on:

- real user behaviour,
- repayment patterns,
- and usability feedback.

26. Jira Board & Sprint Planning

A Scrum-based Jira board was created to manage:

- sprint planning,
- task tracking,
- backlog prioritization,
- and cross-functional collaboration during MVP development.

The board was organized using:

- epics,
- sprint cycles,
- and Agile workflows aligned with the product roadmap.

Key Epics Included

- User Onboarding
- Cash Advance System
- Gig Score Engine
- Auto-Savings
- AI Features
- Testing & Pilot Launch

The Jira board helped simulate a real-world Agile product development environment by enabling:

- sprint-based execution,
- iterative delivery,
- and progress tracking across product, design, and engineering teams.

Figure 1: Backlog View

Figure 2: Dashboard View

27. Ethical Considerations

27.1 Data Privacy & Consent

The platform will use gig-platform behavioural data to generate financial insights and eligibility scores.

Therefore, users must:

- clearly understand what data is collected,
- know how it is used,
- and provide explicit consent before sharing platform information.

Ethical Measures

- Consent-based onboarding
- Transparent data usage policies
- User-controlled permissions
- Secure encrypted storage

27.2 Fairness in AI-Based Gig Scoring

The Gig Score system must avoid unfair bias against users with:

- inconsistent work schedules,
- temporary downtime,
- or low-income periods.

AI models should support financial inclusion rather than penalize vulnerable workers.

Ethical Measures

- Explainable scoring logic
- Bias monitoring
- Regular model audits
- Human review for sensitive decisions

27.3 Responsible Lending

Gig workers often face urgent liquidity needs, making them vulnerable to over-borrowing.

The product should avoid creating debt dependency.

Ethical Measures

- Small-ticket advances only
- Spending and repayment reminders
- Transparent fees with no hidden charges
- Credit limits linked to repayment behaviour

27.4 Transparency & Trust

Users should clearly understand:

- repayment timelines,
- fees,
- deductions,
- and eligibility criteria.

Confusing financial communication can damage trust and increase financial stress.

Ethical Measures

- Simple language interfaces
- Clear repayment breakdowns
- Upfront pricing visibility
- Multilingual explanations

27.5 Security & Fraud Protection

Since the platform handles financial and identity information, protecting user data is essential.

Ethical Measures

- Secure authentication systems
- Fraud monitoring
- Device verification
- Restricted internal data access

27.6 Human Oversight in AI Decisions

Although AI improves scalability, sensitive financial decisions should not be fully automated.

Users should have access to:

- human support,
- escalation channels,
- and decision explanations.

This prevents:

- unfair treatment,
- algorithmic errors,
- and loss of trust.

28. Lean Model Canvas

29. STP Analysis (Phase 4A)

To ensure effective product adoption and resource allocation, the product follows the STP (Segmentation, Targeting, and Positioning) framework.

This helps identify the most suitable customer groups, prioritize high-value segments, and create a clear market position for the product.

29.1 Segmentation

The gig economy workforce can be segmented based on occupation, earning patterns, and financial needs.

Segment	Characteristics	Financial Need
Food Delivery Riders	Frequent earnings, high daily expenses	Short-term liquidity
Ride-Hailing Drivers	Higher earnings, EMI obligations	Credit access & emergency funds
Logistics Workers	Fixed shifts, moderate income	Savings & financial security
Freelancers	Project-based income	Cashflow management

Geographic Segmentation:

- Tier 1 Cities: Mumbai, Bengaluru, Delhi, Pune
- Tier 2 Cities: Indore, Jaipur, Surat

Behavioural Segmentation

- Frequent UPI users
- Users with irregular income
- Users without formal credit history
- First-time fintech adopters

29.2 Targeting

The product will initially focus on:

Target Segment	Description	Key Financial Challenges	Why Target This Segment?	Priority
Food Delivery Riders	Delivery partners working on platforms such as Swiggy and Zomato	Daily cashflow gaps, fuel expenses, emergency repairs	Large user base, high frequency of financial needs, strong smartphone usage	Primary
Ride-Hailing Drivers	Drivers associated with Uber and Ola	Vehicle EMIs, maintenance costs, irregular earnings	Higher earning potential and greater need for structured financial products	Secondary
Logistics & Warehouse Workers	Workers engaged in delivery and warehouse operations	Limited savings, lack of formal credit access	Growing gig workforce with increasing digital adoption	Tertiary

Target Segment	Description	Key Financial Challenges	Why Target This Segment?	Priority
Freelancers & Independent Gig Workers	Individuals earning through project-based work	Income volatility and delayed payments	Future expansion opportunity after validating the core model	Future

29.3 Positioning

Positioning Statement

For urban gig workers who struggle with irregular income and limited access to formal financial services, GigPay is a financial inclusion platform that provides instant cash access, automated savings, and a behavioural financial identity. Unlike traditional banks and loan apps, GigPay understands gig work patterns and delivers financial tools designed specifically for the realities of the gig economy.

30. Product Branding

30.1 Brand Overview

The product is branded as **GigPay**, a financial inclusion platform designed specifically for gig workers.

The brand aims to create trust, financial empowerment, and accessibility for workers who are often underserved by traditional financial institutions.

The name combines:

- **Gig** → Represents gig economy workers
- **Pay** → Represents earnings, financial support, and liquidity

Together, GigPay reflects a platform that helps workers access and manage their money more effectively.

30.2 Brand Personality

The GigPay brand personality can be described as:

Trait	Description
Helpful	Supports users during financial challenges
Trustworthy	Clear and transparent communication
Friendly	Human-centred interactions
Smart	Uses technology to improve financial outcomes
Empowering	Encourages financial confidence

30.3 Logo Overview

The GigPay logo combines a stylized letter "G" with an upward growth arrow, wallet icon, and financial graph elements. The design symbolizes earnings growth, financial progress, and empowerment for gig workers. The blue colour represents trust and reliability, while the green colour reflects financial growth and stability. Together, the logo reinforces GigPay's mission of helping gig workers access immediate financial support while building long-term financial security.

31. The 7Ms of GigPay

The 7Ms framework helps identify the key resources required to successfully develop, launch, and scale GigPay. These elements ensure alignment between product strategy, operations, marketing, and business growth.

M	Description	Application in GigPay
Manpower	Human resources required to build and manage the product	Product Managers, UX Designers, Developers, Data Scientists, QA Engineers, Customer Support Teams
Money	Financial resources needed for development and operations	Product development costs, cloud infrastructure, marketing campaigns, compliance and KYC expenses
Machines	Technology and infrastructure used to deliver the service	Mobile application, cloud servers, payment gateways, analytics platforms, AI models
Materials	Inputs required to create value	User data (with consent), gig platform data, product documentation, design assets
Methods	Processes and methodologies followed	Agile Scrum development, user-centred design, JTBD interviews, continuous testing and iteration
Markets	Target customer segments and distribution channels	Food delivery riders, ride-hailing drivers, logistics workers through partnerships, referrals, and digital marketing
Measurement	Metrics used to evaluate success	User acquisition, repayment rate, retention, savings adoption, Gig Score engagement, revenue per user

32. Product Launch Strategy

GigPay will be launched through a **"Fuel-to-Finance" campaign**, an innovative hyperlocal activation strategy designed specifically for gig workers. Instead of relying solely on digital marketing, the launch will focus on engaging users at locations they frequently visit during their workday.

The objective is to create awareness, drive onboarding, and demonstrate immediate value where financial needs are most relevant.

32.1 Innovative Launch Approach

A. Fuel Station Activation Program

GigPay will partner with selected fuel stations located near delivery hubs and high-density gig worker zones.

At participating stations:

- Riders receive QR codes linking directly to the GigPay app.
- First-time users can unlock welcome rewards.
- Brand ambassadors help workers complete onboarding.
- Demo screens showcase instant cash advance eligibility.

Why This Works

Fuel stations are one of the most frequent and unavoidable touchpoints for delivery riders and drivers.

B. "GigPay Pit Stop" Events

Temporary activation booths will be set up nearby:

- Delivery hotspots
- Rider gathering points
- Fleet parking locations

Workers can:

- Learn about the product
- Check eligibility instantly
- Participate in contests
- Receive onboarding support

32.2 Digital Launch Strategy

Channel	Objective
WhatsApp Campaigns	Direct onboarding
Instagram Reels	Awareness among younger gig workers
YouTube Shorts	Product education
Influencer Partnerships	Credibility and trust
Gig Worker Communities	Word-of-mouth adoption

33. Channel Strategy

GigPay will adopt an **omnichannel distribution strategy** that combines digital channels with strategic offline touchpoints. Since gig workers frequently operate in both online and physical environments, a hybrid approach ensures broader reach, higher trust, and improved onboarding success.

The channel strategy focuses on acquiring users, supporting onboarding, and maintaining long-term engagement through multiple interconnected channels.

33.1 Distribution Channels

Channel Type	Channel	Purpose
Digital	Mobile App	Primary service delivery platform
Digital	Website	Product information and onboarding
Digital	WhatsApp	Customer communication and support
Digital	Social Media	Awareness and engagement
Partner	Gig Platforms	User acquisition and referrals
Offline	Fuel Stations	Local activations and onboarding
Offline	Rider Hubs	Community engagement and support

33.2 Channel Mix Strategy

GigPay will utilize a balanced mix of digital and physical channels while prioritizing owned channels for service delivery and partner channels for customer acquisition. This approach enables scalable growth while maintaining control over the user experience.

A. Owned Channels:

Owned channels provide complete control over user experience and communication.

Key Owned Channels

- Mobile App
- Website
- In-App Notifications
- WhatsApp Support
- Social Media Accounts

Benefits

- Lower long-term acquisition costs
- Better customer insights
- Consistent brand experience
- Direct customer relationships

B. Partner Channels:

Partner channels help accelerate user acquisition and market penetration.

Key Partner Channels

- Delivery platforms
- Ride-hailing platforms
- Fuel stations
- Fleet operators
- Community organizations

Benefits

- Faster market reach
- Increased credibility
- Reduced customer acquisition effort
- Access to existing user networks

33.3 Why Omnichannel Instead of Purely Online?

Although GigPay is a digital-first fintech product, relying solely on online channels may limit adoption among users who:

- have low financial literacy,
- are unfamiliar with fintech products,
- require trust before sharing financial information,
- or prefer assisted onboarding.

Physical touchpoints help bridge this trust gap and improve customer confidence.

33.4 Benefits of an Omnichannel Approach

Benefit	Impact
Higher Trust	Improves adoption among first-time fintech users
Better Accessibility	Supports users with varying digital skills
Stronger Brand Presence	Increases visibility across channels
Improved Conversion Rates	Assisted onboarding reduces drop-offs
Better Customer Experience	Consistent interaction across touchpoints

34. Channel Parity Strategy

Channel parity refers to maintaining a consistent customer experience, brand message, and service quality across all customer touchpoints.

For GigPay, users may interact through multiple channels such as:

- Mobile App
- Website
- WhatsApp Support
- Social Media
- Fuel Station Activations
- Rider Community Events

Maintaining channel parity ensures that users receive the same information, support, and brand experience regardless of how they engage with the product.

34.1 How GigPay Will Maintain Channel Parity

Area	Approach	Expected Outcome
Brand Identity	Use the same logo, colour palette, typography, and visual guidelines across all channels	Consistent brand recognition
Product Information	Maintain identical information on eligibility, fees, repayment schedules, and savings features across app, website, and support channels	Reduced user confusion
Customer Support	Use a centralized CRM system and standardized support procedures	Consistent issue resolution and customer experience
Onboarding Process	Follow the same registration, KYC, UPI linking, and eligibility assessment process across all channels	Seamless user onboarding
Communication & Messaging	Use a unified tone of voice and standardized communication templates	Stronger brand trust and clarity
Promotions & offers	Ensure all campaigns, rewards, and referral programs are communicated consistently across channels	Fair and transparent customer experience
Customer Data Synchronization	Maintain a single customer profile accessible across support and engagement channels	Personalized and uninterrupted interactions

35. User Flow

The primary user flow is designed to help gig workers quickly access financial services with minimal friction while maintaining transparency and trust.

36. User Journey Map

The journey map illustrates the user's actions, emotions, and interactions with GigPay from discovery to long-term usage.

Stage	User Action	User Goal	Emotion	GigPay Opportunity
Awareness	Sees ad or referral	Learn about GigPay	Curious	Clear value proposition
Consideration	Visits website/app	Understand benefits	Interested	Explain features simply
Registration	Signs up and completes KYC	Access financial services	Hopeful	Fast onboarding
Eligibility Check	Connects gig account	Check advance eligibility	Excited	Instant assessment
First Withdrawal	Takes cash advance	Solve immediate cash need	Relieved	Smooth transaction experience
Repayment	Automatic repayment	Avoid penalties	Confident	Transparent repayment process
Savings & Gig Score	Uses savings features	Improve financial stability	Motivated	Rewards and progress tracking
Advocacy	Refers friends	Earn rewards	Satisfied	Referral program

Experimental Task 1 (Phase 4A)

To understand how channel design influences trust, onboarding speed, and user experience in financial services.

A. Channel Comparison:

Criteria	Traditional Bank App	Fintech App
Time Taken	15 min	5 min
Steps Required	12	6
KYC Complexity	High	Medium
UI Simplicity	Medium	High
Trust Perception	High	Medium-High
Ease of Use	Medium	High

B. Friction Points:

Channel	Friction Point
Bank App	Multiple document uploads
Bank App	Complex terminology
Fintech App	Frequent permission requests
Fintech App	Limited explanation of eligibility

C. Trust Leakage Analysis:

Channel	Trust Leakage
Bank App	Low
Fintech App	Medium (permission requests, data access concerns)

D. Scalability Analysis:

Channel	Scalability
Bank App	Moderate
Fintech App	High

Experimental Task 2 (Phase 4A)

To identify factors that may prevent long-term engagement and retention.

A. Interview Summary & Renewal Objections:

User	User Segment	Renewal Objection (Verbatim Response)	Emotional Driver
User 1	Swiggy Delivery Rider	"If the advance fees become expensive, I would stop using the app after a few months."	Price Discomfort
User 2	Zomato Delivery Rider	"I would only keep the app if it helps me save money too, otherwise I don't see much reason to continue."	Low Perceived Value
User 3	Uber Driver	"If getting approved becomes difficult or takes too long, I would switch to another option."	Complexity & Friction
User 4	Logistics Worker	"If the app keeps asking for too much information or permissions, I won't feel comfortable using it."	Trust Issues
User 5	Ola Driver	"If customer support doesn't respond when I have a problem, I would uninstall it."	Support & Trust Issues

B. Key Patterns Observed:

Pattern Observed	Frequency
Trust-related concerns	2/5 Users
Price sensitivity	1/5 Users
Low perceived ongoing value	1/5 Users
Complexity in onboarding/approval	1/5 Users
Customer support concerns	1/5 Users

C. Retention Levers:

Objection	Recommended Solution
High Fees	Transparent pricing
Low Usage	Savings and rewards ecosystem
Complexity	Simplified onboarding
Support Concerns	Faster customer service

37. Customer Service Strategy (Phase 4B)

GigPay's customer service strategy focuses on delivering fast, accessible, and trustworthy support throughout the user lifecycle. Since the platform manages financial transactions and sensitive user data, providing reliable customer support is essential for building trust and improving retention.

The strategy combines self-service resources, AI-powered assistance, and human support to ensure timely issue resolution.

37.1 Customer Support Channels

Channel	Purpose	Availability
In-App Chat Support	Instant issue resolution	24/7
AI Financial Assistant	FAQs and basic guidance	24/7
WhatsApp Support	Conversational support	24/7
Email Support	Complex issue handling	Business Hours
Phone Support	Escalated financial issues	Business Hours
Help Center	Self-service resources	24/7

37.2 Tiered Support Model

Support Level	Issue Type	Resolution Method
Level 1	FAQs, onboarding, Gig Score queries	AI Assistant & Help Center
Level 2	KYC issues, account access, repayment concerns	Customer Support Executive
Level 3	Transaction disputes, fraud, compliance matters	Specialist Support Team

This structure ensures simple issues are resolved quickly while critical financial matters receive expert attention.

38. Customer Lifetime Value (CLV) & Retention Strategy

Customer Lifetime Value (CLV) represents the total value a user generates throughout their relationship with GigPay. The objective is to maximize long-term engagement by encouraging repeat usage, building trust, and expanding adoption of multiple financial services.

The strategy focuses on transforming GigPay from a cash advance provider into a long-term financial companion for gig workers.

38.1 Strategies to Increase CLV

Strategy	Description	Customer Benefit	Business Impact
Gig Score Progression System	Reward users for consistent repayments and platform activity with higher limits and benefits	Access to larger advances and better financial opportunities	Increases retention and repeat usage
Auto-Savings Program	Automatically save small amounts from each pay-out toward financial goals	Builds emergency funds and financial stability	Encourages long-term engagement
Rewards & Loyalty Program	Offer rewards for repayments, savings milestones, and referrals	Earn cashback, points, and incentives	Improves retention and referral growth
Personalized Financial Insights	Provide AI-driven recommendations based on spending, earnings, and repayment behaviour	Better financial decisions and goal achievement	Increases product usage and customer satisfaction
Multi-Product Expansion	Introduce additional financial products such as insurance and goal-based savings	Access to a broader financial ecosystem	Increases revenue per user and CLV
Referral Incentives	Reward users for inviting other gig workers to the platform	Additional earnings and community benefits	Lowers acquisition cost and drives organic growth
Financial Education & Nudges	Deliver bite-sized financial tips and reminders through the app	Improved financial literacy and confidence	Builds trust and strengthens user relationships

38.2 Retention Strategy

Retention Driver	Approach
Trust	Transparent fees and repayment terms
Convenience	Instant approvals and auto repayment
Habit Formation	Auto savings and score tracking
Community	Referral programs and rewards
Personalization	AI-driven recommendations

39. Growth Hacks & Growth Loops

GigPay will leverage product-led growth strategies to acquire users, improve retention, and increase engagement. Rather than relying solely on paid marketing, the platform will focus on creating self-reinforcing growth loops that encourage users to continuously engage with the product and invite others into the ecosystem.

39.1 Growth Loops

Growth Loop	Trigger	User Action	Value Created	Business Impact
Referral Growth Loop	Positive product experience	User refers fellow gig workers	Referral rewards and community benefits	Lower customer acquisition cost and organic growth
Gig Score Engagement Loop	On-time repayments and consistent activity	User improves Gig Score	Higher advance limits and better benefits	Increased retention and repeat usage
Savings Habit Loop	Auto-Savings activation	User saves regularly	Financial stability and goal achievement	Higher engagement and reduced churn
Rewards & Loyalty Loop	Repayment and savings milestones	User earns badges, points, and rewards	Recognition and motivation	Increased platform stickiness
Financial Insight Loop	AI-generated recommendations	User follows personalized suggestions	Improved financial decisions	Greater feature adoption and engagement
Referral + Rewards Loop	Successful referral onboarding	User receives cashback or incentives	Additional earnings opportunities	Viral growth and increased user acquisition
Trust & Usage Loop	Transparent transactions and reliable support	User continues using the platform	Increased confidence in GigPay	Higher lifetime value and retention

39.2 Growth Hacks

Growth Hack	Description	Expected Impact
Referral Rewards	Incentivize users to invite fellow gig workers	Organic user acquisition
Achievement Badges	Reward milestones such as repayment streaks and savings goals	Increased engagement
Leaderboards	Recognize top savers and referrers	Community participation

Growth Hack	Description	Expected Impact
Instant Eligibility Check	Allow users to see potential advance limits before full onboarding	Higher conversion rates
WhatsApp Sharing	Enable one-click referral sharing	Faster user growth
Personalized Nudges	AI-driven reminders and recommendations	Improved retention
Gamified Gig Score	Show progress levels and unlockable benefits	Increased product stickiness

Experimental Task (Phase 4B)

The objective of this exercise was to understand how small businesses manage customer support, identify common customer pain points, analyze resolution processes, and discover opportunities to improve customer experience through better processes, product design, and communication.

A. Business Owner Interview Summary:

Business	Industry	Role Interviewed	Support Channels Used
Café Nirvana	Restaurant/Café	Owner	Phone, WhatsApp, In-Person
IronSport	Fitness Center	Manager	Phone, WhatsApp, Front Desk
Mobile World	Retail Electronics	Owner	Phone, WhatsApp, In-Store

B. Common Customer Support Queries:

Query (Customer's Own Words)	Business Type
"My order is delayed. When will it arrive?"	Café
"I was charged twice. Can you check?"	Café
"Can I pause my membership for one month?"	Gym
"Why is my membership not reflecting in the app?"	Gym
"My phone is under warranty. Why isn't it repaired yet?"	Retail

C. Customer Support Journey:

Stage	Current Process
Customer Raises Issue	Phone call, WhatsApp message, or in-person visit
Issue Logging	Manually noted by staff
Investigation	Owner/manager verifies issue
Resolution	Refund, clarification, replacement, or correction
Follow-Up	Phone or WhatsApp update
Closure	Customer confirmation

D. Average Resolution Time:

Business	Best Case	Worst Case
Café	5–10 Minutes	24 Hours
Gym	15 Minutes	2–3 Days
Retail Store	30 Minutes	7–10 Days

E. Customer Frustration Points:

Situation	Customer Reaction
Delayed response to messages	Repeated follow-ups
Lack of status updates	Confusion and anxiety
Delayed warranty service	Escalation and complaints
Membership issues not resolved quickly	Frustration and negative feedback
Payment disputes	Loss of trust

F. Current Support Process Assessment:

Strengths	Weaknesses
Personalized support	Highly dependent on business owner
Direct communication	No centralized ticket tracking
Fast handling of simple issues	Difficult to scale during busy periods
Familiarity with customers	Lack of automated updates

G. Recommendations:

Area	Current Challenge	Recommendation	Expected Impact
Process Improvement	Customer issues are tracked manually, leading to missed follow-ups and inconsistent resolution times.	Implement a simple ticket management system to log, track, and prioritize customer queries.	Improved accountability, faster issue resolution, and reduced dependency on individual staff members.
Product / UX Improvement	Customers frequently contact support for information that could be self-served, such as order status, membership details, or warranty progress.	Introduce a self-service portal with FAQs, order tracking, membership status, and warranty updates.	Reduced support workload, improved customer satisfaction, and faster access to information.
Communication Improvement	Customers become frustrated due to lack of updates during issue resolution.	Automate WhatsApp/SMS/email notifications for issue acknowledgment, status updates, and closure confirmation.	Increased transparency, reduced follow-up requests, and higher customer trust.

40. Wireframes (Phase 5)

40.1 Onboarding Flow:

1. Splash Screen
2. Mobile Number Verification
3. OTP screen
4. Create Profile
5. KYC Verification

40.2 Core Product Flow:

1. Connect Gig Platform
2. Eligibility Assessment
3. Cash Advance Offer
4. Confirm & Withdraw
5. Withdrawal Success

GIGPAY – CORE PRODUCT FLOW

Cash advance journey for gig workers – from connecting platform to receiving advance in their bank/UPI.

40.3 Main App Screens:

1. Home Dashboard
2. Gig Score Screen
3. Auto-Savings Screen
4. Repayment Screen

40.4 Referral and Assistant Screen:

1. Referral Program
2. Profile & Settings
3. AI Financial Assistant

Product Requirements Document (PRD)

GigPay

Earn Today. Grow Tomorrow.

Version: 1.0

Product Manager: Yash Lele, Nishtha Garg

Date: June 2026

1. Product Overview

1.1 Product Summary

GigPay is a mobile-first fintech platform designed to improve financial inclusion for gig workers such as delivery riders, ride-hailing drivers, and logistics workers. The platform provides instant access to small-ticket cash advances, automated savings, and an alternative financial identity through a proprietary Gig Score.

By leveraging earnings and behavioural data from gig platforms, GigPay enables workers who are traditionally excluded from formal financial systems to access affordable liquidity, build financial resilience, and improve long-term financial stability.

1.2 Problem Statement

Millions of gig workers generate consistent income through digital platforms but remain underserved by traditional financial institutions.

Key challenges include:

- Irregular income patterns
- Limited access to affordable credit
- Dependence on informal lenders
- Lack of emergency financial support
- Inability to build a recognized credit history

As a result, workers experience frequent cashflow shortages and financial stress, limiting their ability to manage emergencies and achieve long-term financial growth.

1.3 Vision Statement

To become the most trusted financial companion for gig workers by providing accessible liquidity, encouraging financial discipline, and enabling long-term financial empowerment.

1.4 Mission Statement

To help gig workers access fair financial opportunities by transforming their work history and earning behaviour into a recognized financial identity.

1.5 Target Audience

Primary Users

Urban gig workers including:

- Food delivery riders
- Ride-hailing drivers
- Logistics workers

User Characteristics

- Monthly income: ₹15,000–₹60,000
 - High smartphone usage
 - Regular UPI usage
 - Limited access to formal credit
 - Irregular income cycles
-

1.6 Core Value Proposition

GigPay provides instant access to affordable liquidity, automated savings, and a recognized financial identity by leveraging gig-platform data and aligning financial services with irregular earning patterns.

1.7 Product Goals

Goal	Success Indicator
Reduce cashflow stress	Increased advance usage
Improve financial stability	Savings feature adoption
Build financial identity	Gig Score engagement
Increase trust in financial services	High repayment rates
Enable long-term retention	90-day retention growth

1.8 Success Metrics

Metric	Target
Monthly Active Users (MAU)	Growth Month-over-Month
Repayment Rate	≥ 95%
90-Day Retention	≥ 40%
Savings Adoption Rate	≥ 50%
Referral Participation Rate	≥ 30%
Customer Satisfaction (CSAT)	≥ 85%

2. User Personas & Stakeholders

2.1 Primary User Personas

Persona 1: Rohit Sharma – Delivery Rider

Attribute	Details
Age	28
Occupation	Food Delivery Rider
Platform	Swiggy / Zomato
Monthly Income	₹25,000–₹35,000
Location	Mumbai
Goals	Manage daily expenses, access emergency funds, improve financial stability
Pain Points	Delayed pay-outs, cashflow shortages, lack of credit access

Persona 2: Sana Shaikh – Ride-Hailing Driver

Attribute	Details
Age	35
Occupation	Uber Driver
Monthly Income	₹40,000–₹55,000
Location	Bangalore
Goals	Handle vehicle expenses and family obligations
Pain Points	Income fluctuations, emergency expenses, limited financial products

Persona 3: Vikas Kumar – Logistics Partner

Attribute	Details
Age	31
Occupation	Logistics Delivery Partner
Monthly Income	₹30,000–₹45,000
Location	Pune
Goals	Maintain cashflow and build financial credibility
Pain Points	Irregular payouts and lack of formal credit history

2.2 Key User Needs

Need	Priority
Immediate access to cash	High
Financial stability	High
Simple onboarding	High
Transparent fees	High
Savings assistance	Medium
Credit-building opportunities	Medium

2.3 Stakeholders

Internal Stakeholders

Stakeholder	Responsibility
Product Manager	Product strategy and roadmap
UX/UI Designer	User experience and interface design
Engineering Team	Product development and maintenance
Data Science Team	Eligibility assessment and Gig Score models
Customer Support Team	User issue resolution
Marketing Team	User acquisition and retention

External Stakeholders

Stakeholder	Responsibility
Gig Workers	Primary product users
Gig Platforms	Earnings and work-history data providers
KYC Verification Partners	User identity verification
Payment Gateway Providers	Transaction processing
NBFC / Lending Partners	Funding cash advances
Regulatory Authorities	Compliance and governance

2.4 Stakeholder Expectations

Stakeholder	Key Expectation
Users	Fast, transparent, and affordable financial services
Lending Partners	Responsible repayment behaviour
Gig Platforms	Secure and compliant integrations
Regulators	Data privacy and financial compliance
Product Team	High adoption and retention rates

2.5 User Pain Points Summary

Pain Point	Impact
Irregular income	Cashflow instability
Limited credit access	Dependence on informal lenders
Delayed pay-outs	Financial stress
Lack of savings habits	Low financial resilience
No recognized credit history	Limited financial opportunities

3. Product Scope & MVP Definition

3.1 Product Scope

The initial release of GigPay focuses on solving the most critical financial challenges faced by gig workers: short-term cashflow shortages, lack of access to formal credit, and limited savings behaviour.

The MVP is designed to validate product-market fit while delivering immediate value through a simple and secure user experience.

3.2 MVP Objectives

Objective	Business Goal
Provide instant cash advances	Reduce financial stress for gig workers
Enable digital onboarding	Minimize onboarding friction
Assess eligibility using gig data	Expand financial access
Encourage savings behaviour	Improve financial resilience
Build Gig Score	Establish alternative financial identity

3.3 In-Scope Features (Version 1.0)

User Onboarding

- Mobile number authentication (OTP)
- User profile creation
- Aadhaar and PAN verification
- UPI account linking

Gig Platform Integration

- Connect gig worker accounts
- Retrieve earnings and work-history data
- Verify active worker status

Eligibility Assessment

- Analyze work history and earnings
- Calculate Gig Score
- Determine cash advance eligibility

Cash Advance

- Display eligible amount
- Show fees and repayment details
- Instant withdrawal to linked UPI account

Dashboard

- Earnings overview
- Available advance balance
- Gig Score tracking
- Savings balance
- Upcoming repayments

Savings Module

- Auto-savings setup
- Savings goal tracking
- Progress monitoring

Repayment Management

- Repayment schedule
- Transaction history
- Auto-debit status

Referral Program

- Invite friends
- Referral rewards tracking

AI Financial Assistant

- Frequently asked questions
- Financial guidance
- Product support

3.4 Out-of-Scope Features (Future Releases)

Feature	Reason for Exclusion
Personal Loans	Requires additional risk models
Insurance Products	Planned for future expansion
Investment Products	Not part of initial problem statement
Credit Cards	Requires regulatory partnerships
Wealth Management	Beyond MVP objectives
Multi-Language Voice Assistant	Future enhancement
Employer Benefits Marketplace	Post-MVP feature

3.5 Feature Prioritization

Feature	Priority	Release
OTP Login	Must Have	MVP
KYC Verification	Must Have	MVP
Gig Platform Integration	Must Have	MVP
Eligibility Assessment	Must Have	MVP
Cash Advance	Must Have	MVP
Dashboard	Must Have	MVP
Repayment Tracking	Must Have	MVP
Auto-Savings	Should Have	MVP
Referral Program	Should Have	MVP
AI Financial Assistant	Could Have	MVP
Insurance	Won't Have	Future Release

3.6 MVP Success Criteria

Metric	Target
User Registration Completion Rate	> 70%
KYC Completion Rate	> 60%
Cash Advance Adoption Rate	> 40%
Repayment Success Rate	> 95%
Savings Feature Adoption	> 50%
Customer Satisfaction (CSAT)	> 85%

3.7 Release Boundary

Version 1.0 focuses exclusively on helping gig workers:

- 1. Access instant liquidity.
- 2. Build a financial identity through Gig Score.
- 3. Develop savings habits.
- 4. Manage repayments transparently.

4. User Stories & Functional Requirements

4.1 User Stories

User Registration & Authentication

US-01

As a gig worker, I want to register using my mobile number so that I can securely access the platform.

Acceptance Criteria

- User enters a valid mobile number.
 - OTP is sent successfully.
 - User can verify OTP.
 - User account is created upon successful verification.
-

KYC Verification

US-02

As a gig worker, I want to complete KYC verification so that I can access financial services on the platform.

Acceptance Criteria

- User can submit Aadhaar details.
 - User can submit PAN details.
 - Verification status is displayed.
 - User receives confirmation upon successful verification.
-

Gig Platform Integration

US-03

As a gig worker, I want to connect my gig platform account so that GigPay can assess my eligibility.

Acceptance Criteria

- User can select a gig platform.
 - User can authorize account access.
 - Earnings and work history are retrieved successfully.
 - Connection status is displayed.
-

Eligibility Assessment

US-04

As a gig worker, I want to know my eligible cash advance amount so that I can manage short-term financial needs.

Acceptance Criteria

- Eligibility assessment is completed automatically.

- User can view Gig Score.
 - User can view eligible advance amount.
 - Fee and repayment information are clearly displayed.
-

Cash Advance Withdrawal

US-05

As a gig worker, I want to withdraw an approved advance instantly so that I can address urgent expenses.

Acceptance Criteria

- User can review advance details.
 - User confirms withdrawal.
 - Funds are transferred to linked UPI account.
 - Success confirmation is displayed.
-

Auto-Savings

US-06

As a gig worker, I want to automatically save a small amount from my earnings so that I can build financial stability.

Acceptance Criteria

- User can enable Auto-Savings.
 - User can select a savings amount.
 - Savings balance updates automatically.
 - Progress toward savings goals is displayed.
-

Repayment Management

US-07

As a gig worker, I want to track upcoming repayments so that I can avoid missed payments.

Acceptance Criteria

- Repayment schedule is visible.
 - Upcoming payment reminders are sent.
 - Repayment history is available.
 - Auto-debit status is displayed.
-

Referral Program

US-08

As a user, I want to refer friends so that I can earn rewards.

Acceptance Criteria

- User can generate referral link.
 - Referral status is trackable.
 - Rewards are credited upon successful referral.
-

AI Financial Assistant

US-09

As a user, I want access to an AI assistant so that I can receive financial guidance and support.

Acceptance Criteria

- User can submit queries.
 - AI provides relevant responses.
 - Frequently asked questions are supported.
 - Escalation to support is available if needed.
-

4.2 Functional Requirements

ID	Requirement	Priority
FR-01	OTP-based mobile authentication	Must Have
FR-02	User profile creation	Must Have
FR-03	Aadhaar and PAN verification	Must Have
FR-04	UPI account linking	Must Have
FR-05	Gig platform account integration	Must Have
FR-06	Eligibility assessment engine	Must Have
FR-07	Gig Score calculation	Must Have
FR-08	Cash advance withdrawal	Must Have
FR-09	Dashboard with financial overview	Must Have
FR-10	Repayment tracking	Must Have
FR-11	Auto-Savings module	Should Have
FR-12	Referral management	Should Have
FR-13	AI Financial Assistant	Could Have

4.3 Business Rules

Rule ID	Business Rule
BR-01	User must complete KYC before accessing cash advances
BR-02	User must connect at least one gig platform account
BR-03	Advance eligibility depends on Gig Score and earnings history
BR-04	Repayment schedule must be disclosed before withdrawal
BR-05	Users may only maintain one active GigPay account
BR-06	Referral rewards are issued only after successful onboarding

4.4 Assumptions

- Users possess a smartphone with internet access.
 - Users have an active UPI account.
 - Gig platform integrations are available.
 - KYC verification partners are operational.
 - Lending partners support cash advance disbursement.
-

4.5 Dependencies

Dependency	Purpose
KYC Provider	Identity verification
UPI Payment Gateway	Fund transfers
Gig Platform APIs	Earnings verification
Lending/NBFC Partner	Cash advance funding
Notification Service	OTPs and reminders

5. Non-Functional Requirements & Technical Requirements

5.1 Overview

In addition to delivering core functionality, GigPay must ensure high standards of security, performance, reliability, scalability, and regulatory compliance. These non-functional requirements are critical because the platform handles sensitive financial and identity data.

5.2 Non-Functional Requirements

ID	Requirement Category	Requirement
NFR-01	Performance	Application screens should load within 3 seconds under normal network conditions
NFR-02	Availability	Platform uptime should be at least 99.5%
NFR-03	Scalability	System should support growth from 10,000 to 1,000,000+ users
NFR-04	Security	All sensitive data must be encrypted in transit and at rest
NFR-05	Reliability	Financial transactions must be processed accurately and consistently
NFR-06	Usability	Onboarding should be completed within 5 minutes
NFR-07	Accessibility	Interface should support users with varying digital literacy levels
NFR-08	Maintainability	Modular architecture should support rapid feature enhancements
NFR-09	Compliance	System must comply with KYC, data privacy, and financial regulations
NFR-10	Monitoring	Real-time monitoring and alerting should be implemented

5.3 Security Requirements

Since GigPay processes financial transactions and identity information, security is a core product requirement.

Security Requirement	Description
User Authentication	OTP-based secure login
Data Encryption	AES-256 encryption for sensitive information
API Security	Secure API authentication and authorization
Device Verification	Detect unauthorized device access

Security Requirement	Description
Fraud Detection	Monitor suspicious transaction patterns
Access Control	Role-based access for internal teams
Audit Logs	Track critical system actions and events

5.4 Performance Requirements

Metric	Target
Login Response Time	< 2 seconds
Dashboard Load Time	< 3 seconds
Eligibility Assessment Time	< 5 seconds
Cash Advance Processing	< 60 seconds
Notification Delivery	< 30 seconds

5.5 Scalability Requirements

The platform should support future expansion without major architectural changes.

Scalability Goals

- Support increasing user volume.
 - Handle peak transaction periods.
 - Support additional financial products.
 - Enable multi-city and multi-segment expansion.
 - Accommodate future AI-driven services.
-

5.6 Reliability Requirements

Requirement	Target
Transaction Success Rate	> 99%
Payment Failure Recovery	Automatic retry mechanisms
Data Backup Frequency	Daily
Disaster Recovery Objective	< 4 hours
Data Retention	As per regulatory requirements

5.7 Compliance Requirements

GigPay operates within the fintech ecosystem and must comply with applicable regulations.

Compliance Area	Requirement
KYC	Aadhaar and PAN verification
Data Privacy	User consent before data collection
Lending Compliance	Partner with regulated NBFCs
Financial Record Keeping	Maintain audit trails
User Transparency	Clear fee and repayment disclosures

5.8 Technical Architecture Requirements

Mobile Application

Component	Technology
Frontend	Flutter / React Native
Authentication	OTP Verification Service
Analytics	Firebase Analytics
Push Notifications	Firebase Cloud Messaging

Backend Infrastructure

Component	Technology
API Layer	Node.js / Python
Database	PostgreSQL
Cloud Hosting	AWS / Google Cloud Platform
Monitoring	Datadog / Cloud Monitoring

Integrations

Integration	Purpose
UPI Gateway	Payments and disbursements
KYC Provider	Identity verification
Gig Platform APIs	Earnings and work-history verification

Integration	Purpose
NBFC Partner APIs	Lending infrastructure
Notification Service	SMS, email, and push notifications

5.9 Data Privacy Requirements

GigPay follows a privacy-first approach.

Key Principles

- Explicit user consent before accessing gig-platform data.
 - Minimal data collection required for service delivery.
 - Secure storage of personally identifiable information.
 - Transparent explanation of data usage.
 - Ability for users to revoke permissions where applicable.
-

5.10 Success Criteria

The system will be considered technically successful if it:

- Maintains high availability and reliability.
- Protects user data and financial information.
- Supports rapid onboarding and transaction processing.
- Scales efficiently as the user base grows.
- Meets all regulatory and compliance requirements.

6. User Flows, Wireframes & UX Requirements

6.1 Overview

The GigPay user experience is designed around three core principles:

1. Simplicity
2. Trust
3. Financial Empowerment

The objective is to help gig workers access financial services with minimal friction while maintaining transparency throughout the user journey.

6.2 Primary User Flow

The primary user flow focuses on enabling users to access instant cash advances through a simple onboarding and eligibility process.

User Flow:

6.3 Secondary User Flows

Savings Flow:

Repayment Flow:

Referral Flow:

AI Assistant Flow:

6.4 Navigation Structure

The application follows a bottom navigation pattern for quick access to core features.

Bottom Navigation Tabs:

Navigation Item	Purpose
Home	Dashboard and financial overview
Gig Score	Creditworthiness and progress tracking
Savings	Savings management
Repayment	Repayment monitoring
Profile	Account settings and preferences

6.5 Screen Inventory

Screen ID	Screen Name	Purpose
SCR-01	Splash Screen	Brand introduction
SCR-02	OTP Login	User authentication
SCR-03	Profile Setup	User registration
SCR-04	KYC Verification	Identity verification
SCR-05	Connect Gig Platform	Earnings verification
SCR-06	Eligibility Assessment	Advance qualification
SCR-07	Cash Advance Offer	Advance approval
SCR-08	Withdrawal Success	Transaction confirmation
SCR-09	Dashboard	Financial overview
SCR-10	Gig Score	Financial identity tracking
SCR-11	Auto-Savings	Savings management

Screen ID	Screen Name	Purpose
SCR-12	Repayment	Repayment monitoring
SCR-13	Referral Program	User acquisition
SCR-14	AI Financial Assistant	Customer support
SCR-15	Profile & Settings	Account management

6.6 Wireframe References

The following wireframes have been created and included in the MVP prototype:

Core Onboarding:

- OTP Login
- Profile Setup
- KYC Verification
- Gig Platform Connection

Core Financial Features:

- Eligibility Assessment
- Cash Advance Offer
- Dashboard
- Repayment Screen

Engagement Features:

- Gig Score
- Auto-Savings
- Referral Program
- AI Financial Assistant

Account Management:

- Profile & Settings
-

6.7 UX Design Principles

Principle	Application
Simplicity	Minimize steps required for key actions
Transparency	Display fees, repayment dates, and eligibility clearly
Trust	Use secure, professional fintech design patterns
Accessibility	Support users with varying digital literacy levels

Principle	Application
Consistency	Maintain uniform navigation and interaction patterns
Feedback	Provide clear success, error, and progress states

6.8 UX Requirements

ID	Requirement
UX-01	User onboarding should be completed in under 5 minutes
UX-02	Critical actions should require no more than 3 taps
UX-03	Financial information must be clearly visible
UX-04	Error messages should provide actionable guidance
UX-05	Progress indicators should be shown during verification processes
UX-06	Users should receive immediate feedback after transactions
UX-07	Navigation should remain consistent across all screens

6.9 Design System

Brand Colours:

Colour	Usage
GigPay Blue	Primary actions and trust indicators
GigPay Green	Success states and financial growth
White	Backgrounds and readability
Dark Gray	Text and information hierarchy

Typography:

Element	Font
Headings	SF Pro / Inter
Body Text	SF Pro / Inter
Buttons	SF Pro Semi bold

Device Standard:

All wireframes and prototypes have been designed for:

iPhone 17 Pro

to ensure a consistent and modern mobile experience.

6.10 Prototype Reference

A clickable MVP prototype has been created in Figma to simulate the end-to-end user experience.

The prototype demonstrates:

- User onboarding
- KYC verification
- Eligibility assessment
- Cash advance withdrawal
- Dashboard navigation
- Savings management
- Repayment tracking
- Referral program
- AI assistant interaction

Prototype and demo links are included in the appendix of this document.

6.11 Success Criteria

The user experience will be considered successful if:

- Users can complete onboarding without assistance.
- Users understand eligibility and repayment details.
- Users can access advances quickly.
- Core features achieve high adoption rates.
- Customer satisfaction exceeds target benchmarks.

7. Success Metrics, Analytics & Tracking Plan

7.1 Overview

To measure product performance and business impact, GigPay will implement a comprehensive analytics framework covering acquisition, activation, engagement, retention, monetization, and customer satisfaction.

The objective is to ensure that product decisions are driven by measurable user behaviour and business outcomes.

7.2 North Star Metric

North Star Metric:
Monthly Active Financial Users (MAFU)

The number of unique users who complete at least one meaningful financial action within a month, such as:

- Cash Advance Withdrawal
- Repayment Completion
- Auto-Savings Contribution
- Gig Score Interaction

7.3 Product Success Metrics

Objective	KPI	Target
User Acquisition	New User Registrations	Growing MoM
User Activation	First Cash Advance Usage	>40%
User Engagement	Monthly Active Users (MAU)	Growing MoM
User Retention	90-Day Retention Rate	>40%
Financial Stability	Savings Adoption Rate	>50%
Trust & Reliability	Repayment Success Rate	>95%
Customer Satisfaction	CSAT Score	>85%

7.4 AARRR Funnel Metrics

Acquisition:

Metric	Description
App Downloads	Total app installations
Sign-Ups	New user registrations
Referral Conversions	Users acquired through referrals

Activation:

Metric	Description
OTP Verification Rate	Successful registrations
KYC Completion Rate	Verified users
First Cash Advance Usage	Activated users

Retention:

Metric	Description
30-Day Retention	Active after 30 days
90-Day Retention	Active after 90 days
Repeat Advance Usage	Returning borrowers

Revenue:

Metric	Description
Revenue per User	Average revenue generated
Advance Transaction Volume	Total disbursement value
Repayment Completion Rate	Financial sustainability

Referral:

Metric	Description
Referrals per User	Referral participation
Referral Conversion Rate	Successful referrals
Viral Coefficient	Organic growth rate

7.5 User Funnel Tracking

Funnel Stage	KPI
App Download	Download Count
OTP Verification	Verification Rate
Profile Completion	Completion Rate

Funnel Stage	KPI
KYC Verification	Verification Success Rate
Gig Platform Connection	Connection Rate
Eligibility Assessment	Eligibility View Rate
Cash Advance Withdrawal	Withdrawal Rate
Repayment Completion	Repayment Rate

7.6 Feature Adoption Metrics

Feature	KPI
Cash Advance	Advance Usage Rate
Gig Score	Monthly Gig Score Views
Auto-Savings	Savings Activation Rate
Repayment Tracking	Repayment Dashboard Usage
Referral Program	Referral Participation
AI Assistant	Monthly Conversations

7.7 Customer Experience Metrics

Metric	Target
Customer Satisfaction (CSAT)	>85%
Net Promoter Score (NPS)	>40
Average Resolution Time	<15 minutes
Support Ticket Volume	Monitored Weekly
App Store Rating	>4.5

7.8 Event Tracking Plan

Event Name	Trigger
User_Signup	User completes registration
OTP_Verified	OTP successfully verified
KYC_Completed	KYC verification completed
Gig_Connected	Gig platform linked
Eligibility_Checked	Eligibility assessment completed
Advance_Viewed	User views eligible advance
Advance_Withdrawn	User withdraws funds
Repayment_Completed	Repayment successful
Savings_Enabled	Auto-Savings activated
Referral_Sent	Referral shared
Referral_Completed	Referral onboarding completed
AI_Query_Submitted	User interacts with AI Assistant

7.9 Analytics Dashboard Requirements

The product team dashboard should track:

Acquisition:

- Downloads
- Registrations
- Referral conversions

Activation:

- KYC completion
- First transaction rate

Engagement:

- MAU
- Feature usage

Retention:

- 30-Day Retention
- 90-Day Retention

Financial Health:

- Advance volume
 - Repayment rates
 - Savings adoption
-

7.10 Reporting Frequency

Metric Type	Frequency
Acquisition Metrics	Daily
Product Usage Metrics	Daily
Retention Metrics	Weekly
Financial Metrics	Weekly
Customer Satisfaction Metrics	Monthly
Executive Business Review	Monthly

7.11 Success Criteria

The MVP will be considered successful if:

- User acquisition demonstrates consistent growth.
- Users complete onboarding and KYC successfully.
- Cash advances are actively utilized.
- Repayment rates remain above 95%.
- Savings features achieve meaningful adoption.
- Retention and satisfaction targets are achieved.

8. Release Plan, Risks & Future Roadmap

8.1 Overview

The GigPay MVP will be launched using a phased rollout strategy to validate product-market fit, reduce operational risk, and gather real-world user feedback before large-scale expansion.

The release plan focuses on controlled deployment, continuous monitoring, and iterative product improvements.

8.2 MVP Release Plan

Phase 1 – Internal Testing:

Duration: 2 Weeks

Objectives

- Validate core functionality
- Test onboarding flow
- Verify repayment logic
- Identify critical bugs

Deliverables

- Stable MVP build
- QA sign-off
- Security validation

Phase 2 – Pilot Launch

Duration: 4 Weeks

Target Users: 100–500 Gig Workers

Launch Cities

- Mumbai
- Pune

Objectives

- Validate adoption
- Measure repayment behaviour
- Assess onboarding effectiveness
- Collect qualitative feedback

Success Criteria

Metric	Target
KYC Completion	>60%
First Advance Usage	>40%
Repayment Rate	>95%
CSAT	>80%

Phase 3 – Expansion Release

Duration: 8–12 Weeks

Target Users: 5,000+ Users

Expansion Cities

- Bengaluru
- Hyderabad
- Delhi NCR

Objectives

- Scale user acquisition
- Improve retention
- Optimize unit economics

8.3 Launch Readiness Checklist

Area	Status Requirement
Mobile Application	Tested and approved
KYC Integration	Operational
UPI Gateway	Operational
Lending Partner Integration	Active
Customer Support Setup	Ready
Analytics Tracking	Configured
Security Review	Completed
Compliance Review	Approved

8.4 Key Dependencies

Dependency	Purpose
NBFC Partner	Funding cash advances
KYC Provider	Identity verification
UPI Gateway	Fund disbursement and repayment
Cloud Infrastructure	Application hosting
Gig Platform Integrations	Eligibility assessment
Notification Service	OTPs and reminders

8.5 Risk Assessment

Product Risks:

Risk	Impact	Mitigation
Low onboarding completion	Reduced activation	Simplify onboarding flow
Low savings adoption	Reduced engagement	Personalized savings nudges
Low referral participation	Slower growth	Improve referral incentives

Business Risks:

Risk	Impact	Mitigation
High customer acquisition cost	Reduced profitability	Referral-led growth strategy
Poor retention	Lower CLV	Gig Score and rewards ecosystem
Limited user trust	Reduced adoption	Transparent communication and support

Financial Risks:

Risk	Impact	Mitigation
High default rates	Financial losses	Risk-based eligibility model
Fraudulent activity	Operational losses	Fraud detection systems
Repayment failures	Revenue impact	Automated repayment mechanisms

Technical Risks:

Risk	Impact	Mitigation
Platform downtime	Service disruption	Cloud redundancy and monitoring
API failures	Feature unavailability	Fallback systems and monitoring
Data security incidents	Trust and compliance issues	Encryption and access controls

8.6 Product Vision Evolution

The long-term vision is to transform GigPay from a short-term liquidity solution into a complete financial operating system for gig workers.

8.7 Exit Criteria for MVP

The MVP will be considered validated if:

Metric	Target
User Registrations	5,000+
KYC Completion	>60%
Advance Usage	>40%
Repayment Rate	>95%
Savings Adoption	>50%
90-Day Retention	>40%
Customer Satisfaction	>85%

Meeting these targets will indicate strong product-market fit and readiness for broader expansion.
